Profile

Mobile architect and principal iOS engineer with 17+ years in software engineering, including 13+ years building mobile products. Hands-on specialist in native iOS architecture for security-sensitive fintech, identity, and blockchain products. Architected a shared platform serving approximately 25 banking apps, enabled Flutter-to-native migrations without rewriting core business logic, and created IcpKit, an open-source Swift library for Internet Computer protocols adopted by Bity and Tangem.

Experience

Bity SA · Neuchâtel, Switzerland 2022 - Mar 2026

Mobile Architect (iOS & Android) · Senior iOS Engineer

- Owned the mobile architecture for iOS and Android from the product's inception while implementing the native iOS application in Swift and SwiftUI.
- Decoupled the presentation layer from native business logic, wallet, blockchain, and security components, enabling both apps to migrate from Flutter to SwiftUI on iOS and Jetpack Compose on Android without rewriting their core logic.
- Led native UI delivery across both platforms, implementing the SwiftUI interface directly and supervising the Jetpack Compose implementation.
- Implemented self-custody, private-key management, crypto exchange, Swiss payments, KYC, document handling, and NFC passport scanning. Integrated Bitcoin, Internet Computer, and EVM networks including Ethereum and Arbitrum, implementing network-specific wallet, token, NFT, and ledger operations.
- Established live, test, and offline-preview implementations for every service, enabling deterministic testing and backend-independent SwiftUI development. Owned delivery through GitLab CI/CD, App Store releases, and production incident resolution.

IcpKit · Open Source · Native Swift package 2022 - Present

Creator & Principal Developer GitHub · Swift Package Index

- Created IcpKit, an open-source Swift library that abstracts Internet Computer protocol complexity behind Swift-native APIs.
- Implemented Candid and CBOR serialization, cryptographic identities, request signing, canister communication, and code generation as a Swift package.
- Added ledger read and write support for ICRC-1 tokens, ICRC-2 approvals, ICRC-3 transaction history, and ICRC-7 NFTs.
- Adopted in production by Bity and Tangem, with development supported by the DFINITY Foundation Developer Grant Program. Maintained approximately 95% unit-test coverage across the Swift codebase.

CREALOGIX AG · Zürich, Switzerland 2020 - 2022

Mobile Software Architect

- Architected and evolved a configuration-driven platform shared by approximately 25 applications for Swiss cantonal, retail, and private banks, isolating institution-specific branding, backend integrations, security requirements, and optional capabilities from the reusable core.
- Automated bank-specific assembly, signing, Promon application hardening, and delivery across multiple backend environments using Jenkins and Groovy, including institution-specific publication workflows.

Mobile Tech Lead 2019 - 2020

- Led the mobile team's technical direction, architecture, code quality, and delivery standards across the shared banking platform and its portfolio of client applications.
- Led candidate evaluation for technical depth, problem solving, and effectiveness in a complex product organization. Across my career, I have conducted roughly 100 engineering interviews.

Core Expertise

- Hands-on mobile architecture and platform strategy
- Native iOS engineering and cross-platform migrations
- Security-sensitive fintech, self-custody, and identity
- Blockchain protocols, cryptography, tokens, and NFTs
- Shared platforms and configuration-driven delivery
- Testable architectures: dependency injection, automation, and previews
- CI/CD, release engineering, app hardening, and production support
- Technical leadership, hiring, and mentoring

Technology & Protocols

- Swift 6, SwiftUI, UIKit, Objective-C, Swift Package Manager
- Flutter, C++, Qt/QML, OpenGL
- GitLab CI/CD, Jenkins, Groovy, Promon
- Cryptography, Candid, CBOR
- Bitcoin, Ethereum/EVM, Internet Computer, ERC-20, ERC-721, ICRC-1/2/3/7
- Core Data, WebSockets, KYC, NFC passport scanning

Konstantinos Gaitanis

Mobile Architect & Principal iOS Engineer

kgaitanis.github.io

Numbrs Personal Finance AG · Zürich, Switzerland

2018 - 2019

Engineering Manager, Payments

- Led Payments, a cross-functional team of eight engineers across iOS, Android, backend, and QA, with responsibility for payments, transfers, payment orders, recurring orders, transaction history, and technical direction.
- Managed hiring, mentoring, and performance development while improving the team's engineering process and automated testing.

Senior iOS Engineer 2017 - 2018

- Built security-sensitive iOS banking features for payments, transfers, payment orders, recurring orders, and transaction history using Swift, UIKit, Objective-C, encryption, encrypted Core Data, API integrations, and WebSockets.

---

eyeMaps - Augmented Reality Maps · iOS / Android

2013 - 2017

Founder & Principal Engineer eyemaps.org

- Created eyeMaps, an augmented-reality map that showed geographic features from the user's actual point of view, aligned with the landscape in front of them.
- Combined GPS, accelerometer, gyroscope, magnetometer, digital elevation data, and OpenStreetMap features within a local 3D coordinate system.
- Built the rendering engine, offline map storage, and backend infrastructure in C++, OpenGL, and Qt/QML, sharing rendering and geographic-data layers while keeping platform integrations native.
- Synchronized the native UI and real-time 3D model at 60 fps with sub-pixel precision across iOS and Android.

---

iMagX - 3D Medical Image Processing · IBA, Belgium

2010 - 2013

C++ Developer

- Designed and implemented user interfaces for proton-beam cancer treatment applications using C++ and Qt.
- Developed 3D visualization tools for high-bit-depth medical imaging data.
- Built critical treatment-planning software requiring precision, performance, and reliability in clinical environments.

UCL - TELE Laboratory · Belgium

2008 - 2010

Research Assistant

- Developed machine-learning and optimization methods for selecting compression parameters from subjective video-quality assessments.

Education

Université catholique de Louvain
Louvain-la-Neuve, Belgium

2004-2008 · PhD
Engineering Sciences · Thesis: Team Behavior Recognition using Dynamic Bayesian Networks

2001-2004 · Master
Electromechanical Engineering, Mechatronics

1999-2001 · Bachelor
Engineering Sciences

Languages

- Greek (native)
- French (C2 · Diplôme d'études françaises, Sorbonne II)
- English (C2 · Cambridge Certificate of Proficiency in English)
- Spanish (conversational)
